Introducing an innovative and affordable, professional-quality camera that enables a single-operator to stream your parish events live to anyone in the world

Single Camera Live Streaming*

Deliver your message live anywhere in the world

JVC's new GY-HM250HW makes sharing worship services and live events with the members of your congregation that can't be in attendance easier than ever. This new professional camcorder enables single-camera coverage producing graphic overlays on recorded or streamed HD video *without requiring an external CG or production switcher*. It's easy for one person to shoot the service or event, record, insert the graphics, and stream the production live—all directly from the camera. Members of your congregation simply need a computer, tablet, or TV connected to Wi-Fi and a streaming app like Facebook, or YouTube to view the live stream.

The camera comes with graphic layouts for a variety of religious events, and congregation specific and event related text can easily be changed by the camera operator. For parishes with limited equipment and personnel resources, this camera provides an innovative and affordable solution for producing professional-quality, single-camera coverage. And, beyond its built-in graphics overlays, the GY-HM200HW includes all the professional features of JVC's popular 4KCAM camcorder, the GY-HM250, including **Full Auto Mode**, perfect for a single-camera operator.
