Verizon LTE modem and RM-LP100 controller

# Infinite Possibilities

## Acquire from the world. Deliver to the world.

Now broadcast quality HD images can be acquired remotely from and be delivered to anywhere there is an IP connection. The **KY-PZ100** is the world's first PTZ camera to provide true IP connectivity via 4G-LTE, and can also integrate into Wi-Fi®, LAN and other industry standard infrastructures.\* The KY-PZ100 also features 0.01 Lux sensitivity, remote operation from smart devices, on-board recording onto microSD/XC media, FTP capability and a smooth and efficient direct-drive mechanism. Providing the ultimate PTZ control is the **RM-LP100**, the world's first IP-centric remote camera controller which can command the movement of up to 100 cameras and store 100 preset positions. Pristine 1080 60P/I H.264 video can be streamed wirelessly to CDN's via RTMP, or securely encoded to the ProHD BR-DE800 decoder with SDI output. The revolutionary PTZ IP Camera System from JVC Professional — its possibilities are infinite.
